## **Family Relationships An Evolutionary Perspective:**

Family Relationships Catherine A. Salmon, Todd K. Shackelford, 2008 Kinship ties the close relationships found within the family have been a central focus of evolutionary biological analyses of social behavior ever since biologist William Hamilton extended the concept of Darwinian fitness to include an individual's actions benefiting not only his own offspring but also collateral kin Evolutionary biologists consider organisms not only reproductive strategists but also nepotistic strategists If a person's genes are just as likely to be reproduced in her sister as in her daughter then we should expect the evolution of sororal investment in the same way as one expects maternal investment This concept has revolutionized biologists understanding of social interaction and developmental psychologists understanding of the family However kinship ties have largely been ignored in other areas of psychology particularly social psychology *Family Relationships* brings together leading theorists and researchers from evolutionary psychology and related disciplines to illustrate the ways in which an evolutionary perspective can inform our study and understanding of family relationships The contributors argue that family psychology is relationship specific the relationship between mother and daughter is different from that between father and daughter or that between brother and sister or sister and sister In other words humans have evolved specialized mechanisms for processing information and motivating behavior that deal with the distinct demands of being a mate father mother sibling child or grandparent Such an evolutionary perspective on family dynamics provides a unique insight into human behavior This volume will be an indispensable resource for psychologists sociologists and anthropologists as well scholars of family marriage and animal behavior

Encyclopedia of Human Relationships Harry T. Reis, Susan Sprecher, 2009-03-15 Library Journal Best Reference 2009 An excellent gateway to further examination of any of the subdisciplines of relationship science or as a research tool in its own right Library Journal Relationships are

fundamental to nearly all domains of human activity from birth to death. When people participate in healthy, satisfying relationships, they live, work, and learn more effectively. When relationships are distressed or dysfunctional, people are less happy, less healthy, and less productive. Few aspects of human experience have as broad or as deep effects on our lives. The *Encyclopedia of Human Relationships* offers an interdisciplinary view of all types of human associations: friends, lovers, spouses, roommates, coworkers, teammates, parents and children, cousins, siblings, acquaintances, neighbors, business associates, and so forth. Although each of these connections is unique in some respect, they share a common core of principles and processes. These three volumes provide a state-of-the-art review of the extensive theories, concepts, and empirical findings about human relationships.

*Evolutionary Psychology* David M. Buss, 2004. This revised text provides a comprehensive overview of the field of evolutionary psychology. It includes information on landmarks in human evolution, intuitive biology, women's long-term mating strategies, men's long-term mating strategies, and problems of kinship.

**The Herd Impulse, Democratization and Evolutionary Psychology** Theodore Schroeder, 1921

**Exploring the Cognitive Basis of Individual Differences in Interest in Infants** Rodrigo Andrés Cárdenas, 2010

*Evolutionary Psychology* Steven J. C. Gaulin, Donald McBurney, 2004

The second edition of *Evolutionary Psychology* is the only book on the market that shows the relevance of evolutionary thinking to the entire range of psychological phenomena, and it does so at a level appropriate for readers new to the field. Each chapter deals with a particular topic by illustrating how an evolutionary approach illuminates behavior as a response to problems faced by humans in our evolutionary past. The authors, representing the disciplines of both psychology and anthropology, present their material traditionally: they first provide the foundation for understanding the fundamentals of modern evolutionary theory, then systematically apply this theory to learning, cognition, perception, emotion, development, pathology, and more. For any reader interested in a richer understanding of human behavior and the psychological

mechanisms that underlie it      **Evolutionary Psychology and Motivation** Jeffrey A. French, Alan C. Kamil, Daniel W.
