Anand Vemula, The MB 920 exam is designed to test your understanding of core ERP concepts and how Microsoft Dynamics 365 integrates with various business functions. The exam covers modules such as Finance, Supply Chain Management, Commerce, Human Resources, Project Operations, and Business Central. It examines the capabilities of these modules in streamlining processes like financial management, inventory control, procurement, human resources, and project lifecycle management. Key areas include managing core financial operations such as general ledger, accounts payable, receivable, budgeting, and forecasting. It also covers Supply Chain Management functions like product information management, inventory, and procurement, while diving into the Commerce module for e-commerce, point of sale, and fraud protection. Human Resources focuses on employee management, compensation, and absence tracking, while Project Operations emphasizes resource scheduling, project accounting, and invoicing. The Business Central module is particularly focused on the needs of small to medium-sized businesses, providing a comprehensive financial and operational management solution. Additionally, the integration of Dynamics 365 with the Power Platform and Microsoft 365 is crucial for enhancing automation, collaboration, and data analysis across all modules. This study guide provides in-depth insights into these functionalities, helping candidates prepare for the MB 920 exam by mastering key features of Dynamics 365 ERP solutions and how they contribute to efficient business operations.

High Performance and Hardware Aware Computing Rainer Buchty, 2008

Parallel Computer Organization and Design Michel Dubois, Murali Annavaram, Per Stenström, 2012-08-30. Teaching fundamental design concepts and the challenges of emerging technology, this textbook prepares students for a career designing the computer systems of the future. In-depth coverage of complexity, power, reliability, and performance, coupled with treatment of parallelism at all levels, including ILP and TLP, provides the state-of-the-art training that students need. The whole gamut of parallel architecture design options is explained, from core microarchitecture to chip multiprocessors to large-scale multiprocessor systems. All the chapters are self-contained yet concise enough that the material can be taught in a single semester, making it perfect for use in senior undergraduate and graduate computer architecture courses. The book is also teeming with practical examples to aid the learning process, showing concrete applications of definitions. With simple models and codes used throughout, all material is made open to a broad range of computer engineering science students with only a basic knowledge of hardware and software.
