Desmarais,2009-06-19 Activity theory is a way of describing and characterizing the structure of human tivity of all kinds First introduced by Russian psychologists Rubinshtein Leontiev and Vigotsky in the early part of the last century activity theory has more recently gained increasing attention among interaction designers and others in the hum computer interaction and usability communities see for example Gay and H brooke 2004 Interest was given a signi cant boost when Donald Norman suggested activity theory and activity centered design as antidotes to some of the putative ills of human centered design Norman 2005 Norman who has been credited with coining the phrase user centered design suggested that too much attention focused on human users may be harmful that to design better tools designers need to focus not so much on users as on the activities in which users are engaged and the tasks they seek to perform within those activities Although many researchers and practitioners claim to have used or been in uenced by activity theory in their work see for example Nardi 1996 it is often dif cult to trace precisely where or how the results have actually been shaped by activity theory Inmanycases evendetailedcasestudiesreportresultsthatseemonlydistantlyrelated if at all to the use of activity theory Contributing to the lack of precise and traceable impact is that activity theory spite its name is not truly a formal and proper theory   *Video Editing Techniques Course* Brian Smith, The Video Editing Techniques Course provides a comprehensive guide to the art of video editing This course covers various aspects of video editing including the history and importance of video editing understanding video editing software basic and advanced editing techniques storytelling and narrative editing editing for different platforms collaborative editing color correction and grading audio editing and mixing exporting and delivery editing for different genres advanced tips and tricks legal and ethical considerations building an editing portfolio and the future of video editing Students will learn the fundamentals of video editing and gain practical skills in using popular video editing software They will explore techniques such as cutting and splicing footage adding transitions color correction and grading visual effects and motion graphics audio editing and mixing green screen and chroma keying storytelling and narrative editing editing for different platforms and more Additionally the course covers important topics like collaborative editing understanding aspect ratios and resolutions optimizing videos for different platforms copyright laws privacy and consent usage rights and licenses and building a strong editing portfolio The course aims to equip students with

Brown ,Stefania Croci,2026-01-22 This Research Topic is the second volume of the Vasculitis community series Please see volume I here Autoimmune disease occurs when the immune system mistakenly mounts a pro inflammatory response against self In some instances depending on the target self antigen the blood vessels become the site of inflammation This phenomenon is referred to as autoimmune vasculitis It is not a single disorder but rather a group of rare diseases This group of diseases includes the more commonly known diseases such as Kawasaki s disease or granulomatosis with polyangiitis GPA as well as the less common Behcet s disease and the ultra rare Goodpasture s disease Due to the rarity of these diseases research into the etiology of autoimmune vasculitides has been challenging Nevertheless over the last 20 years through multi center collaborations and sheer determination significant advances have been made in this area This includes the development of humanized mouse models of disease to dissect the pathogenesis of diseases as well as successful Phase III clinical trials These advances have opened up this area of research and we are now developing a fundamental understanding of these diseases which we hope will translate into more targeted and effective treatments The goal of this Research topic is to encourage researchers to share their recent advances in their specific area of autoimmune vasculitis Through the collation of articles across the broad range of these diseases it is hoped that the new ideas tools protocols therapeutics etc can then be applied across of variety of diseases Thus collectively advancing the field as a whole Specifically we are seeking new advances developed in a specific autoimmune vasculitide that could be applied to other forms of disease Articles relating to the identification of new molecular or cellular pathways specific to autoimmune vasculitis as well as new experimental or repurposed therapeutics that could specifically treat disease would be relevant We welcome Original Research Review Case Reports Clinical Trial Methods Mini Review Perspective and Systematic Review articles related to but not limited to the following sub topics Advances into disease pathogenesis such as new molecular or cellular pathways that cause inflammation to occur specifically in the blood vessels New or repurposed therapeutics that can restore tolerance and stop disease progression New animal models of autoimmune vasculitis New in vitro methods to measure blood vessel inflammation Up to date reviews in any one autoimmune vasculitic disease or the whole field   *Future Music* ,2002
