

# DNA

Deoxyribonucleic Acid

DNA is a large molecule found inside the cells of living things. It is made up of different elements that carry genetic information. DNA is made up of four basic building blocks called **nucleotides**.

## NUCLEOTIDES

The order of nucleotides within a strand of DNA forms a special genetic **code**. This code provides instructions for the development, growth and functioning of all living things.

## CHROMOSOMES

Humans have a total of 46 DNA molecules. These are organised into long, coiled-up structures called **chromosomes**.

Chromosomes are found in the **nucleus**, the control center of the cell.

They are responsible for the genetic information that is passed down from parents to children. Humans have 23 pairs of chromosomes in each of their cells.

**The Biotechnology Career Guide** Dr. Gaurav Kumar, 2026-01-19 The Biotechnology Career Guide is a comprehensive and practical roadmap for students and early career professionals seeking clarity and direction in the rapidly evolving field of biotechnology. Designed to bridge the gap between academic learning and real world opportunities, this book presents biotechnology not only as a scientific discipline but as a diverse and dynamic career ecosystem. The book covers foundational concepts and core techniques in biotechnology followed by in depth exploration of educational pathways, sector specific career opportunities in medical, agricultural, industrial and environmental biotechnology, and emerging roles driven by innovation and technology. Dedicated chapters address government and private sector employment, higher studies and research opportunities, entrepreneurship and startups, and the essential technical, analytical, communication and regulatory skills required to succeed in today's competitive landscape. With a strong emphasis on career readiness, the book integrates ethical and regulatory perspectives, global trends and future prospects, helping readers make informed and responsible professional decisions. Contributions from undergraduate, postgraduate and doctoral students, developed under academic supervision, add practical insights and diverse perspectives. Written for undergraduate and postgraduate students, researchers, educators and aspiring professionals, The Biotechnology Career Guide serves as both a reliable academic reference and a career planning companion. Whether you are exploring biotechnology for the first time or preparing to take the next step in your professional journey, this book equips you with the knowledge, skills and vision to build a meaningful and impactful career in biotechnology.

**Molecular Politics** Susan Wright, 1994-10-15 The promise of genetic engineering in the early 1970s to profoundly reshape the living world, activated a variety of social interests. In its future promotion and control, with public safety, gene patents and the future of genetic research at stake, a wide range of interest groups competed for control over this powerful new technology. In this comparative study of the development of regulatory policy for genetic engineering in the United States and the United Kingdom, Susan Wright analyzes government responses to the struggles among corporations, scientists, universities, trade unions and public interest groups over regulating this new field. Drawing on archival materials, government records and interviews with industry executives, politicians, scientists, trade unionists and others on both sides of the Atlantic, *Molecular Politics* provides a comprehensive account of a crucial set of policy decisions and explores their implications for the political economy of science. By combining methods from political science and the history of science, Wright advances a provocative interpretation of the evolution of genetic engineering policy and makes a
