

DNA: the thread of life

Despite the tremendous diversity of living things, all life on Earth shares one thing in common: a genetic system. We explore the basics of DNA composition and structure, and how DNA complexity varies across select species.

COMPOSITION

The genetic system of all living things is a set of genetic instructions encoded in nucleic acids (either DNA or RNA). DNA is encoded by 4 molecules, known as **nucleotides**. They are called Adenine (**A**), Thymine (**T**), Cytosine (**C**) and Guanine (**G**). These nucleotides are arranged into pairs (A with T and C with G) and together each pair is known as a base pair (bp).
