frequency and time domain metallic waveguides and Hertzian dipole field solutions. Material on cylindrical and spherical coordinate systems is presented in appendices where it can be studied whenever relevant or convenient. Worked examples are presented throughout to illuminate and in some cases extend key concepts. Each chapter also contains a summary and review questions. Note this book provides a one semester alternative to Dr Rao's classic textbook for two semester courses.

Energy Miracles H.B. Glushakow, 2022-04-27. It makes no difference whether global warming is or is not a human caused condition because it is only human caused action that will mediate its effects. This book shows why wind and solar alone are not enough. To get a handle on this we need a backup plan that is an energy miracle. This is the book that gives concerned folks an understanding of exactly how to tackle global warming. At the same time it gives students and scientists the tools to jump start the search for energy miracles. The politicians and administrators who need a low cost solution that comes to grips with the coming debacle will be happy to know that this book provides that as well. In this century over one billion people living in low lying coastal areas will be inundated by rising seas. It's time to get moving. Read this book and then pass it on to a friend or an associate.
