Art, Ethics and Environment Ólafur Páll Jónsson, Æsa Sigurjónsdóttir, 2009-03-26 Nature has been a recurrent theme in arts and philosophy for several decades Nature is experienced in variety of contexts artists have been enacting with nature as phenomena material space environment or simply as a place or an idea In philosophy this is evidenced by an increasing interest in environmental ethics and aesthetics as well as in philosophy of biology and metaphysics In the 1960s new affinities between art and nature developed and became among the characteristics of contemporary art Environmental approaches became essential and artists were engaging the public closely with social and physical spaces Generating processes rather than creating objects both in nature as well as in the urban landscape artists reintroduced art into nature and nature into art and opened up new ways of engaging environment creating non permanent artworks which produced a new understanding of creativity that following generations are still exploring The distinction between art and nature became increasingly blurred at the same time as the ancient dichotomy of culture and nature became controversial With the rise of environmental ethics in the 1970s philosophers began discussing nature as an independent source of moral values rather than a mere stage for moral life deriving its value from relations among humans It has both been suggested that nature might have independent moral value much like persons are thought to have such value or that nature can be an active participant in a morally virtuous life Both aesthetics of nature and environmental ethics have become established fields in contemporary philosophy with their distinct bibliography to draw on But even if distinct and properly so these two new fields might be more closely related than often suggested The aim of this collection is to bring together different trends in thinking about nature and value that are

distinctive of these changing moods in art and philosophy and to juxtapose them with some other ways of thinking about these issues such as economics and religion The authors include Holmes Rolston III Antje von Graevenitz Roger Pouivet Eric Palazzo and Emily Brady The essays and artworks in this volume derive from the conference Nature in the Kingdom of Ends held in Selfoss Iceland on June 11th and 12th 2005 *Teaching the Nature of Science Through Process Skills* Randy L. Bell, 2008 Engage your students with inquiry based lessons that help them think like scientists This book has made such a difference in my teaching of science this school year I have had some of the most amazing science lessons and activities with my students and I attribute this to what I learned from this book I have watched my 5th grade students go from being casual observers in science to making some amazing observations that I even missed We enjoy our class investigations and the students ask for more Alyce F Surmann Sembach Middle School Teachers will relate well to the author's personal stories and specific examples given in the text especially the ones about events in his own classroom like having the grasshoppers escape into the classroom Andrea S Martine Director of Curriculum and Instruction Warrior Run School District With *Teaching the Nature of Science through Process Skills* author and science educator Randy Bell uses process skills you'll recognize such as inference and observation to promote an understanding of the characteristics of science knowledge His personal stories taken from years of teaching set the stage for a friendly narrative that illuminates these characteristics of scientific knowledge and provides step by step guidance for implementing inquiry activities that help children understand such important yet abstract concepts With Randy as your guide you can better adhere to current science education standards that urge teachers to go beyond teaching science content to teach children about the practice and the nature of science in a way that engages all learners in grades three through eight Investigate further More than 50 ideas and activities for teaching the nature of science to help you meet content standards A comprehensive framework to guide you in integrating the approach across the science curriculum throughout the school year and across the grade levels A goldmine of reproducible resources such as work sheets notebook assignments and more Assessment guidance that helps you measure your students nature of science understanding [Creativity](#) Mark A. Runco, 2023-03-11 *Creativity Research Development and Practice Third Edition* summarizes the research on the development expression and enhancement of creativity It draws from the full range of disciplines studying creativity including psychology business education economics philosophy neuroscience and more This volume includes exploration of research on the nature nurture debate what influences creativity how creativity is related to personality how social context may affect creativity mental health and its relation to creativity gender differences and how creativity is related to and differs from invention innovation imagination and adaptability The third edition has been thoroughly updated with a new chapter on psychometrics and substantial updates on the biology and neuroscience of creativity politics and creative cognition It includes quotations graphics boxed controversial issues and biographical examples from unambiguously creative individuals Summarizes research from the full range of perspectives on creativity

Includes a new chapter on the psychometrics of creativity Distinguishes controlled cognition from associative and intuitive cognition Features substantial updates on the biology and neuroscience of creativity Explores creativity research relating to media business and leadership Addresses the big issues including cultural differences traditional intelligence computer and animal creativity and more
