Refined Ray Tracing inside Single- and Double-Curved Concave Surfaces Balamati Choudhury, Rakesh Mohan Jha, 2015-09-24 This book describes the ray tracing effects inside different quadric surfaces Analytical surface modeling is a priori requirement for electromagnetic EM analysis over aerospace platforms Although numerically specified surfaces and even non uniform rational basis spline NURBS can be used for modeling such surfaces for most practical EM applications it is sufficient to model them as quadric surface patches and the hybrids thereof It is therefore apparent that a vast majority of aerospace bodies can be conveniently modeled as combinations of simpler quadric surfaces i e hybrid of quadric cylinders and quadric surfaces of revolutions Hence the analysis of geometric ray tracing inside is prerequisite to analyzing the RF build up This book describes the ray tracing effects inside different quadric surfaces such as right circular cylinder general paraboloid of revolution GPOR GPOR frustum of different shaping parameters and the corresponding visualization of the ray path details Finally ray tracing inside a typical space module which is a hybrid of a finite segment of right circular cylinder and a frustum of GPOR is analyzed for practical aerospace applications

Ray Tracing in the Troposphere, Ionosphere and Magnetosphere Ming S. Wong,1971 Ray patterns are presented which delineate the propagation of radio signals to large distances by ducting under super refracting conditions in the troposphere ionosphere and magnetosphere The unity of ducting is emphasized in the sense that the ducts whether they occur in the troposphere ionosphere or magnetosphere all have formally similar features This unity follows from the circumstance that the rays which propagate to large distances are those which graze a super refracting layer at shallow glancing angles and which generally traverse only those regions of the propagation medium where the refractive index deviates but slightly from the free space value Author
