Analyzing and Modeling Interdisciplinary Product Development Frank Neumann, 2015-09-30 Frank Neumann focuses on establishing a theoretical basis that allows a description of the interplay between individual and collective processes in product development For this purpose he introduces the integrated descriptive model of knowledge creation as the first constituent of his research framework As a second part of the research framework an analysis and modeling method is proposed that captures the various knowledge conversion activities described by the integrated descriptive model of knowledge creation Subsequently

this research framework is applied to the analysis of knowledge characteristics of mechatronic product development MPD Finally the results gained from the previous steps are used within a design support system that aims at federating the information and knowledge resources contained in the models published in the various development activities of MPD
