Computing In Geographic Information Systems:

Geographical Information Systems and Computer Cartography Chris B. Jones,2014-05-01 A concise text presenting the fundamental concepts in Geographical Information Systems GIS emphasising an understanding of techniques in management analysis and graphic display of spatial information Divided into five parts the first part reviews the development and application of GIS followed by a summary of the characteristics and representation of geographical information It concludes with an overview of the functions provided by typical GIS systems Part Two introduces co ordinate systems and map projections describes methods for digitising map data and gives an overview of remote sensing Part Three deals with data storage and database management as well as specialised techniques for accessing spatial data Spatial modelling and analytical techniques for decision making form the subject of Part Four while the final part is concerned with graphical representation emphasising issues of graphics technology cartographic design and map generalisation **Geographic**

design and map generalisation **High Performance Geographic Information System** Wei Xiong,Ye Wu,Xue Ouyang,Qing-ren Jia,Hao Chen,Luo Chen,2024-10-15 The development of earth observation and computing technology has promoted the wide application of spatio temporal big data and artificial intelligence The enrichment of data and the improvement of computational performance make it possible to perform spatio temporal analysis and computation on a larger scale Therefore it is necessary to study the optimization methods and application methods of high performance geocomputing starting from GIS architecture in order to form a high performance GIS that can serve the society and economy and support various applications This book focuses on the architecture technology platform and application of high performance GIS analyzes the key technologies of spatio temporal big data organization and access parallelized spatial analysis and processing large scale map rendering and parallel visualization under the high performance computing architecture explains how to build high performance geographic information applications and looks forward to the trend of the new generation of GIS Fundamentals of Spatial Information Systems Robert Laurini,Derek Thompson,1992-03-09 The study and application of spatial information systems have been developed primarily from the use of computers in the geosciences These systems have the principle functions of capturing storing representing manipulating and displaying data in 2 D and 3 D worlds This book approaches its subject from the perspectives of informatics and geography presenting methods of conceptual modeling developed in computer science that provide valuable aids for resolving spatial problems This book is an essential textbook for both students and practitioners It is indispensable for academic geographers computer scientists and the GIS professional Serves as the first comprehensive textbook on the field of Spatial Information Systems also known as Geographic Information Systems Contains extensive illustrations Presents numerous detailed examples

Cognitive Aspects of Human-Computer Interaction for Geographic Information Systems T.L. Nyerges,D.M. Mark,Robert Laurini,Max J. Egenhofer,2012-12-06 A significant part of understanding how people use geographic information and technology concerns human cognition This book provides the first comprehensive in depth examination of the cognitive aspects of human computer interaction for geographic information systems GIS Cognitive aspects are treated in relation to individual group behavioral institutional and cultural perspectives Extensions of GIS in the form of spatial decision support systems and SDSS for groups are part of the geographic information technology considered Audience Geographic information users systems analysts and system designers researchers in human computer interaction will find this book an information resource for understanding cognitive aspects of geographic information technology use and the methods appropriate for examining this use *CyberGIS for Geospatial Discovery and Innovation* Shaowen Wang,Michael F. Goodchild,2018-06-26 This book elucidates how cyberGIS that is new generation geographic information science and systems GIS based on advanced computing and cyberinfrastructure transforms computation and data intensive geospatial discovery and innovation It comprehensively addresses opportunities and challenges roadmaps for research and development and

major progress trends and impacts of cyberGIS in the era of big data The book serves as an authoritative source of information to fill the void of introducing this exciting and growing field By providing a set of representative applications and science drivers of cyberGIS this book demonstrates how cyberGIS has been advanced to enable cutting edge scientific research and innovative geospatial application development Such cyberGIS advances are contextualized as diverse but interrelated science and technology frontiers The book also emphasizes several important social dimensions of cyberGIS such as for empowering deliberative civic engagement and enabling collaborative problem solving through structured participation In sum this book will be a great resource to students academics and geospatial professionals for leaning cutting edge cyberGIS geospatial data science high performance computing and related applications and sciences Geographic Information Science and Systems Paul A. Effective use of today s vast geographic information GI resources requires more than just powerful technology for problem solving It requires science to help us understand the way the world works and to help us devise effective procedures for making decisions Three previous editions have established this text as a defining multidisciplinary treatment of the scientific principles that underpin the use of geographic information technologies for problem solving This extensively revised and updated edition provides a guide to the enduring scientific principles and information systems that support effective use of today s GI It also provides a primer on essential methods for analysis of GI and the ways in which effective management of GI informs policy and action Geographic Information Systems Terri C. Walker,Richard Kendall Miller,1990 *High Performance Computing for Geospatial Applications* Wenwu Tang,Shaowen Wang,2020-07-20 This volume fills a research gap between the rapid development of High Performance Computing HPC approaches and their geospatial applications With a focus on geospatial applications the book discusses in detail how researchers apply HPC to tackle their geospatial problems Based on this focus the book identifies the opportunities and challenges revolving around geospatial applications of HPC Readers are introduced to the fundamentals of HPC and will learn how HPC methods are applied in various specific areas of geospatial study The book begins by discussing theoretical aspects and methodological uses of HPC within a geospatial context including parallel algorithms geospatial data handling spatial analysis and modeling and cartography and geovisualization Then specific domain applications of HPC are addressed in the contexts of earth science land use and land cover change urban studies transportation studies and social science The book will be of interest to scientists and engineers who are interested in applying cutting edge HPC technologies in their respective fields as well as students and faculty engaged in geography environmental science social science and computer science **Algorithmic Foundations of Geographic Information Systems** Marc van Kreveld,1997-11-12 This state of the art tutorial brings together current research and development on Geographic Information Systems In nine chapters the authors present a unique survey ranging from the history and basic characteristics to current issues of precision and robustness of geometric computing
