Flp Microsatellite Platform Operations Technology:

The FLP Microsatellite Platform Jens Eickhoff,2015-12-10 This book represents the Flight Operations Manual for a reusable microsatellite platform the Future Low cost Platform FLP developed at the University of Stuttgart Germany It provides a basic insight on the onboard software functions the core data handling system and on the power communications attitude control and thermal subsystem of the platform Onboard failure detection isolation and recovery functions are treated in detail The platform is suited for satellites in the 50 150 kg class and is baseline of the microsatellite Flying Laptop from the University The book covers the essential information for ground operators to controls an FLP based satellite applying international command and control standards CCSDS and ECSS PUS Furthermore it provides an overview on the Flight Control Center in Stuttgart and on the link to the German Space Agency DLR Ground Station which is used for early mission phases Flight procedure and mission planning chapters complement the book

Space Operations Craig Cruzen,Michael Schmidhuber,Young H. Lee,2022-03-15 This book includes a selection of reviewed and enhanced contributions presented at the SpaceOps 2021 the 16th International Conference on Space Operations held virtually in May 2021 The chapter selections were made based upon their relevance to the current space operations community The contributions represent a cross section of three main subject areas Mission Management management tasks for designing preparing and operating a particular mission Spacecraft Operations preparation and implementation of all activities to operate a space vehicle crewed and uncrewed under all conditions and Ground Operations preparation qualification and operations of a mission dedicated ground segment and appropriate infrastructure including antennas control centers and communication means and interfaces The book promotes the SpaceOps Committee s mission to foster the technical interchange on all aspects of space mission operations and ground data systems while promoting and maintaining an international community of space operations experts

Systems-Level Feasibility Analysis of a Microsatellite Rendezvous With Non-Cooperative Air Force Institute of Technology (U,ALLEN R. TOSO,2025-05-22 The United States is very dependant upon the use of space Any threat to our ability to use it as desired deserves significant study One such asymmetric threat is through the use of a microsatellite The feasibility of using a microsatellite to accomplish an orbital rendezvous with a non cooperative target is being evaluated This study focused on identifying and further exploring the technical challenges involved in achieving a non cooperative rendezvous A systems engineering analysis and review of past research quickly led to a concentration on the guidance navigation and control GNC elements of the microsatellite operation While both the control laws and orbit determination have been previously evaluated as feasible the integration of the two remained in question This research first validated past efforts prior to exploring the integration Impulsive and continuous thrust control methods and linear and nonlinear estimator filters were all candidate components to a potential system solution A simple yet robust solution could not be found to meet reasonable rendezvous criteria using essentially off the shelf technology and algorithms Results reveal a simple linear filter is

a misapplication and will not at all work A nonlinear filter coupled with either a continuous or impulsive thrust controller was found to get somewhat close but never close enough to attach to the target satellite Successful GNC subsystem integration could only be achieved for a very simple case ignoring orbit perturbations such as the earth's oblateness A top level system architecture for a non cooperative rendezvous microsatellite has been developed The technical complexity however requires more complex algorithms to solve the rendezvous problem This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant
