**Information Assurance and Computer Security** J.P. Thomas, M. Essaaidi, 2006-12-12 Today's society can no longer function without information technology. Essential infrastructure including the transportation system, banking, the entertainment industry, the health care system, government, the military, and the education system can no longer survive without modern technology. This increasing dependence on information technology creates new opportunities for the benefit of society. However, it also opens an avenue that can be exploited for illicit purposes. The stakes are high and many attacks go undetected or unreported. In addition to losses such as data or other forms of intellectual property, financial theft, or the shut down of infrastructure, computer security attacks that target critical infrastructure such as nuclear power plants have the potential to cause human casualties on a massive and unprecedented scale. This book provides a discussion on a wide variety of viewpoints on some of the main challenges facing secure systems. This book will therefore be of major interest to all researchers in academia or industry with an interest in computer security. It is also relevant to graduate and advanced level undergraduate students who may want to explore the latest developments in the area of computer and information security.

Computer Security Assurance Using the Common Criteria Mark S. Merkow, Jim Breithaupt, 2004. Up-to-date coverage explains IT security assurance methodologies and the activities within any of the CC-defined user roles that are necessary for high-quality and proven secure IT software and hardware. **Information Assurance** Andrew Blyth, Gerald L. Kovacich, 2006-07-19 When you first hear the term information assurance you tend to conjure up an image of a balanced set of reasonable measures that have been taken to protect the information after an assessment has been made of risks that are posed to it In truth this is the Holy Grail that all organisations that value their information should strive to achieve but which few even understand Information assurance is a term that has recently come into common use When talking with old timers in IT or at least those that are over 35 year old you will hear them talking about information security a term that has survived since the birth of the computer In the recent past the term information warfare was coined to describe the measures that need to be taken to defend and attack information This term however has military connotations after all warfare is normally their domain Shortly after the term came into regular use it was applied to a variety of situations encapsulated by Winn Schwartau as the following three classes of information warfare Class 1 Personal information warfare Class 2 Corporate information warfare Class 3 Global information warfare Political sensitivities lead to warfare being replaced by the operations a much more politically correct word Unfortunately operations also has an offensive connotation and is still the terminology of the military and governments
