Electronics Kevin Karplus,2023-06-06 This textbook is for a first course on electronics It assumes no prior electronics
experience but does assume that students have had calculus 1 single variable differential calculus and high school physics A
key idea of the course is that students need a lot of design experience and hands on work rather than a lot of theory The
course is centered around the labs which are a mix of design labs and measurement modeling labs This unique volume takes
students from knowing no electronics to being able to design and build amplifier and filter circuits for connecting sensors to
microcontrollers within 20 weeks Students design a digital thermometer a blood pressure meter an optical pulse monitor an
EKG an audio preamplifier and a class D power amplifier They also learn how to measure and characterize components
including impedance spectroscopy of a loudspeaker and of electrochemical electrodes Related Link s **Control**
