Applied Semantics Gilles Barthe,Peter Dybjer,Luis Pinto,João Saraiva,2003-08-02 This book is based on material presented at the international summer school on Applied Semantics that took place in Caminha Portugal in September 2000 We aim to present some recent developments in programming language research both in semantic theory and in implementation in a series of graduate level lectures The school was sponsored by the ESPRIT Working Group 26142 on Applied Semantics APPSEM whichoperatedbetweenApril1998andMarch2002 The purpose of this working group was to bring together leading reseachers both in semantic theory and in implementation with the speci c aim of improving the communication between theoreticians and practitioners TheactivitiesofAPPSEMwerestructuredintonineinterdisciplinarythemes A Semantics for object oriented programming B Program structuring C Integration of functional languages and proof assistants D Veri cation methods E Automatic program transformation F Games sequentiality and abstract machines G Types and type inference in programming H Semantics based optimization I Domain theory and real number computation These themes were identi ed as promising for pro table interaction between semantic theory and practice and were chosen to contribute to the following general topics description of existing programming language features design of new programming language features implementation and analysis of programming languages transformation and generation of programs veri cation of programs The chapters in this volume give examples of recent developments covering a broad range of topics of interest to APPSEM   ACM SIGPLAN Notices ,2004-09   Advanced Functional Programming ,2004   **Programming Languages and Systems** Naoki Kobayashi,2006-11-06 This book constitutes the refereed proceedings of the 4th Asian Symposium on Programming Languages and Systems APLAS 2006 held in Sydney Australia in November 2006 The 22 revised full papers presented together with 2 invited talks and 1 tutorial examine foundational and practical issues in programming languages and systems

Martin Davis on Computability, Computational Logic, and Mathematical Foundations Eugenio G. Omodeo,Alberto Policriti,2017-01-27 This book presents a set of historical recollections on the work of Martin Davis and his role in advancing our understanding of the connections between logic computing and unsolvability The individual contributions touch on most of the core aspects of Davis work and set it in a contemporary context They analyse discuss and develop many of the ideas and concepts that Davis put forward including such issues as contemporary satisfiability solvers essential unification quantum computing and generalisations of Hilbert s tenth problem The book starts out with a scientific autobiography by Davis and ends with his responses to comments included in the contributions In addition it includes two previously unpublished original historical papers in which Davis and Putnam investigate the decidable and the undecidable side of Logic as well as a full bibliography of Davis work As a whole this book shows how Davis scientific work lies at the intersection of computability theoretical computer science foundations of mathematics and philosophy and draws its unifying vision from his deep involvement in Logic *The Engineering of Digital Twins* John Fitzgerald,Cláudio Gomes,Peter Gorm Larsen,2024-08-24 This book is about the engineering of Digital Twins DTs of cyber physical systems CPSs It goes behind the glossy image of DTs to help researchers and advanced professionals to ask and answer the fundamental questions underpinning the development of a DT What are the foundational concepts of the DT How do different engineering disciplines interact in creating a DT How should the physical and digital worlds be connected and how do the imperfections and faults inherent in both worlds affect the DT s qualities How can we use a DT to support decisions and how do we maintain it through life To this end the book is structured in five parts Foundations introduces the DT concept the potential benefits of DTs seen from a business perspective and foundations for DT engineering Models and Data presents the range of models and data that form the core assets of DTs for CPSs It covers ways in which models can be produced and calibrated and considers how data is derived from a CPS and communicated to its DT Next Services for Digital Twins details some of the main services that a DT provides by building on the assets of models and data including visualisation fault detection and diagnosis and support for decision making Realising Digital Twins then covers the realisation of DTs including a platform allowing engineers to construct DTs from reusable components Case studies in food production robotics and marine engineering are presented using a systematic framework that aligns with the DT engineering concepts introduced in the earlier parts of the book Eventually Advanced Topics in Digital Twins introduces advanced topics in delivering dependable DT enabled systems focusing on security and privacy the capacity for autonomy and a range of open research topics This book aims at researchers in DT technology and design including advanced master and doctoral students as well as engineering practitioners aiming to develop DTs The most common techniques described in the main text will be accessible via open source projects including further DT examples exercises and solutions as well as pointers to emerging standards frameworks and platforms Classroom materials exercises and solutions are available to lecturers through a dedicated Web
