Products** D. P. Moran, 2012-12-06 The properties of fats and the characteristics of some food products based on fats have
been documented in several books Individual fats such as milkfat however have received less attention despite many
successful initiatives to increase their utilization in food products Moreover the availability of data on the function of fats in
the context of major manufactured food products has often been constrained by the general reluctance of manufacturers to
disclose details of working practices In some areas such as yellow fat spreads the market has changed dramatically over the
last decade or so by the introduction of a broad class of new products resulting from a trend among consumers in the
developed world towards reduced fat consumption A review of this general area therefore now seems very timely In the
preparation of this book we have been fortunate to have had the support of internationally recognised specialists with much
relevant experience and achievement in their subject areas We believe that their contributions not only subscribe to the main
aim of this book by providing useful insight into the functional properties of the major fats in foods but also offer information
concerning recent and novel methods of processing these fats Opportunities for possible future developments are indicated
