The Urban Microclimate as Artifact Sascha Roesler, Madlen Kobi, 2018-09-24 Urban microclimates cannot be explained solely on the basis of scientific phenomena but are also affected materially and spatially by the city's local architecture The layout design and facade construction of buildings have a major impact on wind and temperature conditions For this reason architecture and urban design that have an effect on microclimates must be investigated in their social and cultural contexts

The publication uses international case studies to explain these relationships. The focus is on manifestations of urban microclimates in an architectural and urban design context. The places investigated are located in France, Italy, the USA, New Zealand, the Philippines, Taiwan, and Burkina Faso.

Handbook of Mobile Data Privacy Aris Gkoulalas-Divanis, Claudio Bettini, 2018-10-26. This handbook covers the fundamental principles and theory and the state of the art research systems and applications in the area of mobility data privacy. It is primarily addressed to computer science and statistics researchers and educators who are interested in topics related to mobility privacy. This handbook will also be valuable to industry developers as it explains the state of the art algorithms for offering privacy. By discussing a wide range of privacy techniques providing in depth coverage of the most important ones and highlighting promising avenues for future research, this handbook also aims at attracting computer science and statistics students to this interesting field of research. The advances in mobile devices and positioning technologies together with the progress in spatiotemporal database research have made possible the tracking of mobile devices and their human companions at very high accuracy while supporting the efficient storage of mobility data in data warehouses which this handbook illustrates. This has provided the means to collect, store, and process mobility data of an unprecedented quantity, quality, and timeliness. As ubiquitous computing pervades our society, user mobility data represents a very useful but also extremely sensitive source of information. On one hand, the movement traces that are left behind by the mobile devices of the users can be very useful in a wide spectrum of applications such as urban planning, traffic engineering, and environmental pollution management. On the other hand, the disclosure of mobility data to third parties may severely jeopardize the privacy of the users whose movement is recorded, leading to abuse scenarios such as user tailing and profiling. A significant amount of research work has been conducted in the last 15 years in the area of mobility data privacy and important research directions such as privacy preserving mobility data management, privacy in location sensing technologies, and location based services, privacy in vehicular communication networks, privacy in location based social networks, and privacy in participatory sensing systems, which this handbook addresses. This handbook also identifies important privacy gaps in the use of mobility data and has resulted to the adoption of international laws for location privacy protection, e.g. in EU, US, Canada, Australia, New Zealand, Japan, Singapore, as well as to a large number of interesting technologies for privacy protecting mobility data, some of which have been made available through open source systems and featured in real world applications.
