

Lighting Switch

Illust. 57

Lighting switch, ignition switch, charge indicator, etc.

The lighting switch has three positions: "O"—off position, "D"—dim lights, and "B"—bright lights.

Headlights and Rear Light

The headlights and rear light on your tractor are sealed-beam lights especially developed for farming operations. The parts are so constructed that the filament, reflector, lens and gasket are all assembled in a unit permanently sealed against dirt, moisture and corrosion. Should a filament burn out or a lens break, the complete unit must be replaced. See your International Harvester dealer.

Illust. 57A

Headlights on the tractor.

Illust. 57B

Rear light mounted on the tractor.

Fuse

A cartridge-type SPE-20 fuse is located in the fuse housing between the lighting switch and the ammeter. If a short circuit occurs in the lighting circuit, the fuse will burn out and break the circuit, preventing damage to the electrical system.

It is important to use the same capacity fuse for replacement. If the lights fail, check the fuse. If the fuse continually burns out, check the electrical wiring for short circuits.

To install a new fuse, unscrew the fuse housing on the instrument panel (Illust. 57), pull out the old fuse, and replace it with a new one.

Generator and Regulator

The generator supplies current to keep the battery in a charged condition and to replace the energy consumed by the cranking motor and lights. The generator on your tractor is sealed to prevent the entrance of dirt and moisture. It is hinge-mounted on the right side of the engine crankcase and is driven by a V-belt from the fan pulley. The generator, as received from the factory, has a fixed third brush which is set to give the maximum generator output.
