

## Equity Aspects in Transportation Projects: Case Study of Transit Fare Change in Haifa

Bat-hen Nahmias-Biran, Nir Sharaby, and Yoram Shifan

Department of Transportation and Geo-Information Engineering, Faculty of Civil and Environmental Engineering, Technion—Israel Institute of Technology, Haifa, Israel

### ABSTRACT

This article analyzes the equity effects of transit fare integration by evaluating its impacts on different groups of riders through a case study of the city of Haifa in Israel. Vertical equity was analyzed using descriptive statistics to determine the distribution of the fare change among various groups of riders. The Lorenz curve and the Gini index were used to analyze whether the fare change was equally distributed. While the Gini index showed that the fare change was not equally distributed, the vertical analysis indicated that disadvantage passengers benefited most from the reform.

**Key Words:** equity, evaluation, fare, impact, public transit

### 1. INTRODUCTION

There is a growing body of literature addressing the subject of equity, which is becoming more important in transportation planning and investment. The various forms of equity are manifested in practical concerns regarding the incorporation of equity issues into the appraisal of transport projects. Although there has been major progress in equity assessment, equity considerations are still lacking in many transport appraisal guides and practices (Thomopoulos, Grant-Muller, and Tight 2009). Furthermore, the methodologies employed to evaluate transport infrastructure projects have certain limitations. The core obstacle is that they are based on efficiency, usually expressing all the impacts in monetary terms and focusing only on the aggregate welfare; they cannot distinguish between certain groups or people, and are not able to address intangible factors and strategic concerns
