Not Bored! Anthology 1983-2010 Bill Brown, 2011 Massive anthology of essays and illustrations published in NOT BORED between 1983 and 2010 Dentro l'algoritmo Donata Columbro, 2022-12-13 L'algoritmo davvero una mano invisibile che governa le nostre vite E da quando succede Oggi questo termine sinonimo di computer ma anche di intelligenza artificiale in realt un insieme di regole un procedimento costruito dall'essere umano per ottenere la soluzione a un problema Pu decidere al posto nostro modificare la rappresentazione di una categoria di persone radicalizzare rappresentazioni del mondo o incrementare al massimo il tempo che viene trascorso su app e dispositivi In questo libro vogliamo capire cos l'algoritmo che sembra influire in modo cos preponderante nella nostra quotidianit Perch ce ne stiamo occupando tutti cos tanto in questi ultimi anni cosa cambiato rispetto a quando sono arrivati i primi social network e come possiamo capirne il funzionamento per migliorare il nostro tempo **What Is Life?** Ed Regis, 2008-04-01 In 1944 the Nobel Prize winning physicist Erwin Schrödinger published a groundbreaking little book called What Is Life In fewer than one hundred pages he argued that life was not a mysterious or inexplicable phenomenon as many people believed but a scientific process like any other ultimately explainable by the laws of physics and chemistry Today more than sixty years later members of a new generation of scientists are attempting to create life from the ground up Science has moved forward in leaps and bounds since Schrödinger's time but our understanding of what does and does not constitute life has only grown more complex An era that has already seen computer chip implanted human brains genetically engineered organisms genetically modified foods cloned mammals and brain dead humans kept alive by machines is one that demands fresh thinking about the concept of life While a segment of our national debate remains stubbornly mired in moral quandaries over abortion euthanasia and other right to life issues the science writer Ed Regis demonstrates how science can and does provide us with a detailed understanding of the nature of life Written in a lively and accessible style and synthesizing a wide range of contemporary research What Is Life is a brief and illuminating contribution to an age old debate **Every Life Is on Fire** Jeremy England, 2020-09-15 A preeminent physicist unveils a field defining theory of the origins and purpose of life Why are we alive Most things in the universe aren't And everything that is alive traces back to things that puzzlingly weren't For centuries the scientific question of life's origins has confounded us But in Every Life Is on Fire physicist Jeremy England argues that the answer has been under our noses the whole time deep within the laws of thermodynamics England explains how counterintuitively the very same forces that tend to tear things apart assembled the first living systems But how life began isn't just a scientific question We ask it because we want to know what it really means to be alive So England an ordained rabbi uses his theory to examine how if at all science helps us find purpose in a vast and mysterious universe In the tradition of Viktor Frankl's Man's Search for Meaning Every Life Is on Fire is a profound testament to how something can come from nothing **Life Evolving** Christian De Duve, 2002 A Nobel laureate discusses findings in the biological sciences in the past half century and explains what they reveal about the

nature of life **The science of life** Herbert G. Wells, Julian Huxley, George P. Wells, 1946 The Stuff of Life Eric P. Widmaier, 2003-09 In *The Stuff of Life* Eric P. Widmaier deconstructs the fundamental processes of the human body and focuses on those vital biological substances that aren't particularly well understood. By examining the blueprints that dictate what we are, Widmaier answers questions including: Why are some fats worse than others? Is cholesterol actually good for anything? How does the stomach digest food? Why do we need to breathe and why can't we hold our breath for very long? How does a single carbon atom contribute to the difference between a man and a woman? Where does our energy come from? *The Stuff of Life* answers these and many more common questions about how the body works in a concise, easy-to-read handbook complete with illustrations.

Life Itself Francis Crick, 1981 A basic book about biology, the origin of life, and the origin of man.

Science of Life Books, 1971 **Blueprint for a Cell** Christian De Duve, 1991 In narrative form, the author, winner of the Nobel Prize, delineates the blueprint of life: the pattern of chemical events on which all life depends and demonstrates unity in the diversity of life on earth.

The Vital Question Nick Lane, 2016 A game-changing book on the origins of life, called the most important scientific discovery since the Copernican revolution in *The Observer*.

From Matter to Life Sara Imari Walker, Paul C. W. Davies, George F. R. Ellis, 2017-02-23 This book tackles the most difficult and profound open questions about life and its origins from an information-based perspective.

The Science of Life Herbert George Wells, 1971 Life's Edge Carl Zimmer, 2021-03-18 Profound, lyrical, and fascinating. *Life's Edge* will give you a newfound appreciation for life itself. It is the work of a master science writer at the height of his skills. Ed Yong, author of *An Immense World*. We all assume we know what life is, but the more scientists learn about the living world—from protocells to brains, from zygotes to pandemic viruses—the harder they find it to locate the edges of life where it begins and ends. What exactly does it mean to be alive? Is a virus alive? Is a fetus? Carl Zimmer investigates one of the biggest questions of all: What is life? The answer seems obvious until you try to seriously answer it. Is the apple sitting on your kitchen counter alive, or is only the apple tree it came from deserving of the word? If we can't answer that question here on earth, how will we know when and if we discover alien life on other worlds? The question hangs over some of society's most charged conflicts: whether a fertilized egg is a living person, for example, and when we ought to declare a person legally dead. *Life's Edge* is a fascinating investigation by one of the most celebrated science writers of our time. Whether he is handling pythons in Alabama or searching for hibernating bats in the Adirondacks, Zimmer revels in astounding examples of life at its most bizarre. He tries his own hand at evolving life in a test tube with unnerving results. Charting the obsession with Dr. Frankenstein's monster and how Coleridge came to believe the whole universe was alive, Zimmer leads us all the way into the labs and minds of researchers working on engineering life from the ground up.

The Science of Life : a Summary of Contemporary Knowledge about Life and Its Possibilities Julian Huxley, G. P. Wells, 1930 Life from Light Michael Werner, Thomas Stockli, 2007-06-01 In 1923, Therese Neumann, a nun in Southern Germany, stopped eating and drinking. Apart from the wafer

given at Mass she did not eat again despite living for a further 35 years Other similar cases have been reported over the years often holy men from the East and have taken on something of a mythical status However they remain obscure enough to be brushed aside by modern scientists Michael Werner presents a new type of challenge to sceptics A fit family man in his 50s he has a doctorate in Chemistry and is the managing director of a research institute in Switzerland In this remarkable account he describes how he stopped eating in 2001 and has survived perfectly well without food ever since *Life Itself* Robert Rosen,1991 Why are living things alive As a theoretical biologist Robert Rosen saw this as the most fundamental of all questions and yet it had never been answered satisfactorily by science The answers to this question would allow humanity to make an enormous leap forward in our understanding of the principles at work in our world For centuries it was believed that the only scientific approach to the question What is life must proceed from the Cartesian metaphor organism as machine Classical approaches in science which also borrow heavily from Newtonian mechanics are based on a process called reductionism The thinking was that we can better learn about an intricate complicated system like an organism if we take it apart study the components and then reconstruct the system thereby gaining an understanding of the whole However Rosen argues that reductionism does not work in biology and ignores the complexity of organisms *Life Itself* a landmark work represents the scientific and intellectual journey that led Rosen to question reductionism and develop new scientific approaches to understanding the nature of life Ultimately Rosen proposes an answer to the original question about the causal basis of life in organisms He asserts that renouncing the mechanistic and reductionistic paradigm does not mean abandoning science Instead Rosen offers an alternate paradigm for science that takes into account the relational impacts of organization in natural systems and is based on organized matter rather than on particulate matter alone Central to Rosen's work is the idea of a complex system defined as any system that cannot be fully understood by reducing it to its parts In this sense complexity refers to the causal impact of organization on the system as a whole Since both the atom and the organism can be seen to fit that description Rosen asserts that complex organization is a general feature not just of the biosphere on Earth but of the universe itself *The Dance of Life* Magdalena Zernicka-Goetz,Roger Highfield,2021-01-28 **Life as Energy** Alexis Mari Pietak,2011 To many modern scientists a living thing is not significantly different from a lifeless object understood in terms of its basic parts genes and molecules Whereas science has given us many wonderful things it has also taken away something essential our ability to consider life seriously as a unique form of energy Alexis Pietak an exciting new scientific thinker argues that the livingness of a life form is a very real kind of energy that we must recognize along with other kinds of energy such as heat and light In this book Dr Pietak builds an entirely new holistic and rational science of life that could significantly enhance our understanding of individual life forms ecological systems and even human sustainability on our planet This original and groundbreaking book highlights a crucial missing element in mainstream science **The Molecules of Life** Russ Hodge,2009 An exploration of genetic engineering that examines DNA RNA and proteins and

discusses structures behaviors and how chemistry and physics allow organic molecules to build tissues organs and organisms
