Dogs Their Fossil Relatives And Evolutionary History:

Dogs Xiaoming Wang, Richard H. Tedford, 2008-07-03 Two noted paleontologists present a detailed portrait of the family Canidae across 40 million years of evolution in this illustrated volume After decades of research and analysis paleontologists Xiaoming Wang and Richard H Tedford established the modern framework for understanding the evolutionary relationship of canids Combining their work with Mauricio Ant n s reconstructions of both extinct and extant species Wang and Tedford now present a nuanced and visually stunning portrait of the origin and evolution of canids The fossil record of the Canidae particularly those from their birthplace in North America are the strongest of their kind among known groups of carnivorans Such a wonderfully detailed evolutionary history makes the canid an ideal model organism for the mapping of predator behavior and morphological specializations With its innovative illustrated approach to this important branch of animal and fossil study *Dogs* provides an unprecedented reference for anyone interested in the evolution of these fascinating animals

Dogs Xiaoming Wang, 2008 *Dog Behaviour, Evolution, and Cognition* Ádám Miklósi, 2015 This is the first book to collate and synthesize the recent burgeoning primary research literature on dog behaviour evolution and cognition The author presents a new ecological approach to the understanding of dog behaviour demonstrating how dogs can be the subject of rigorous and productive scientific study without the need to confine them to a laboratory environment This second fully updated edition of *Dog Behaviour Evolution and Cognition* starts with an overview of the conceptual and methodological issues associated with the study of the dog followed by a brief description of their role in human society An evolutionary perspective is then introduced with a summary of current research into the process of domestication The central part of the book is devoted to issues relating to the cognitive aspects of behaviour which have received particular attention in recent years from both psychologists and ethologists The book s final chapters introduce the reader to many novel approaches to dog behaviour set in the context of behavioural development and genetics This second edition recognises and discusses the fact that dogs are increasingly being used as model organisms for studying aspects of human biology such as genetic diseases and ageing Specific attention is also given in this edition to attachment behaviour which emerges between humans and dogs the importance of inter specific communication in the success of dogs in human communities and the broad aspects of social cognition and how this may contribute to human dog cooperation Directions for future research are highlighted throughout the text which also incorporates links to human and primate research by drawing on homologies and analogies in both evolution and behaviour The book will therefore be of relevance and use to anyone with an interest in behavioural ecology including graduate students of animal behaviour and cognition as well as a more general audience of dog enthusiasts biologists psychologists veterinarians and sociologists *Jackals, Golden Wolves, and Honey Badgers* Keith Somerville, 2022-11-15 This book explores the fascinating and complex lives of the honey badger the African jackals black backed and side striped African golden wolves and Eurasian golden jackals In recent years interest in these creatures has

grown exponentially through wildlife documentaries and media clips showing the aggressive fearless and tenacious behaviour of the honey badger with jackals often presented in a supporting role Written by renowned journalist and educator Keith Somerville this accessible volume includes historical narratives folklore and contemporary accounts of human wildlife relationships and conflicts It traces the evolution of the species their foraging and diet the development of their relationships with humans and their commensal kleptocratic and symbiotic relationships with other carnivores raptors and birds It also charts the recent expansion in European jackal numbers and ranges now including as far west as the Netherlands and as far north as Finland Blending historical observations by non scientists colonial officials administrators and early conservationists with contemporary scientific accounts it presents a new multidisciplinary approach that will interest researchers scientists and students in wildlife conservation human wildlife relations zoology biology and environmental science The Princeton Field Guide to Prehistoric Mammals Donald R. Prothero, 2013-11-05 One of the leading textbooks in its field *Bringing Fossils to Life* applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics bridging the gap between purely theoretical paleobiological textbooks and those that describe only invertebrate paleobiology and that emphasize cataloguing live organisms instead of dead objects For this third edition Donald R Prothero has revised the art and research throughout expanding the coverage of invertebrates and adding a discussion of new methodologies and a chapter on the origin and early evolution of life Scripta Geologica, 1971 **Canadian Journal of**
