On the Evolution of Human Behavior Peter C. Reynolds,1981 Challenging many of the premises of conventional anthropological theory On the evolution of human behavior draws on recent evidence from psychobiology linguistics and ethology to trace the evolution of human social behavior from that of other primates Rejecting the assumption that significant behavioral discrepancies between man and other primate species stem from equally significant psychological differences Reynolds argues instead that small evolutionary changes may result in greatly increased complexity of behavior His frankly ethological theory of human origins assumes that reason and instinct evolve together and that instinctual mechanisms are necessary for the emergence of human culture book cover

Evolution, Human Behaviour and Morality Olli Lagerspetz,Jan Antfolk,Ylva Gustafsson,Camilla

Kronqvist,2016-08-12 This book highlights the recent re emergence of Edward Westermarck s work in modern approaches to morality and altruism examining his importance as one of the founding fathers of anthropology and as a moral relativist who identified our moral feelings with biologically evolved retributive emotions Questioning the extent to which current debates on the relationship between biology and morality are similar to those in which Westermarck himself was involved the authors ask what can be learnt from his arguments and from the criticism that he encountered Drawing on Westermarck s manuscripts and papers as well as his published work the authors show the importance of situating debates whether modern or classical in their correct methodological and philosophical context This volume is a rigorous assessment of the ways in which morality is connected with human biological nature It plays close attention to the development of debates in this field and will appeal to scholars of sociology anthropology and philosophy

Cronk, Napoleon A. Chagnon, William Irons, This volume presents state of the art empirical studies working in a paradigm that has become known as human behavioral ecology The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled Evolutionary Biology and Human Social Behavior An Anthropological Perspective During the two decades that have passed since then this innovative approach has matured and expanded into new areas that are explored here The book opens with an introductory chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development Subsequent chapters written by both younger scholars and established researchers cover a wide range of societies and topics organized into six sections The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior evolutionary psychology and dual inheritance theory The second section includes five studies of mating efforts in a variety of societies from South America and Africa The third section covers parenting with five studies on societies from Africa Asia and North America The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue the demographic transition using data from Europe North America and Asia The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America The sixth and final section consists of a single chapter that places the volume in a broader critical and comparative context The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior The volume will be of interest to anthropologists and other professions working on the study of cross cultural human behavior Lee Cronk is associate professor of anthropology at Rutgers University Napoleon Chagnon is professor of anthropology emeritus at the University of California Santa Barbara William Irons is professor of anthropology at Northwestern University Evanston Illinois

Cartwright, 2023-05-31 In recent years a new discipline has arisen that argues human behaviour can be understood in terms of evolutionary processes Evolutionary Explanations of Human Behaviour is an introductory level book covering evolutionary psychology this new and controversial field The book deals with three main areas human reproductive behaviour evolutionary explanations of mental disorders and the evolution of intelligence and the brain The book is particularly suitable for the AQA A A2 syllabus but will also be of interest to undergraduates studying evolutionary psychology for the first time and anyone with a general interest in this new discipline Human Nature and the Evolution of Society Stephen Sanderson, 2014-02-04 Drawing on evolutionary psychology sociobiology and human behavioral ecology this introduction to human behavior and the organization of social life explores the evolutionary dynamics underlying social life **Evolution and Contextual Behavioral Science** David Sloan Wilson, Steven C. Hayes, 2018-09-01 What do evolutionary science and contextual

behavioral science have in common Edited by David Sloan Wilson and Steven C Hayes this groundbreaking book offers a glimpse into the histories of these two schools of thought and provides a sound rationale for their reintegration Evolutionary science ES provides a unifying theoretical framework for the biological sciences and is increasingly being applied to the human related sciences Meanwhile contextual behavioral science CBS seeks to understand the history and function of human behavior in the context of everyday life where behaviors occur and to influence behavior in a practical sense This volume seeks to integrate these two bodies of knowledge that have developed largely independently In Evolution and Contextual Behavioral Science two renowned experts in their fields argue why ES and CBS are intrinsically linked as well as why their reintegration or reunification is essential The main purpose of this book is to continue to move CBS under the umbrella of ES and to help evolutionary scientists understand how working alongside contextual behavioral scientists can foster both the development of ES principles and their application to practical situations Rather than the sequential relationship that is typically imagined between these two schools of thought this volume envisions a parallel relationship between ES and CBS where science can best influence positive change in the real world

Human Evolutionary Psychology Louise Barrett, Robin Dunbar, John Lycett, 2001-11-27 Other people and their behaviour are a subject of endless fascination for us Our understanding of why we behave in certain ways can be greatly enhanced if we take an evolutionary perspective Understanding the evolutionary pressures that have shaped human behaviour can give us a new insight into why we prefer a good gossip to a lengthy session of algebra or why children are so good at learning language and so poor at sharing nicely with others Human Evolutionary Psychology offers a comprehensive overview of all aspects of human evolutionary behaviour and psychology Tackling everything from mate choice to marriage patterns childcare to cultural evolution Human Evolutionary Psychology critically assesses the value of evolutionary explanations to humans in both modern western society and traditional pre industrial societies The combination of broad scope and in depth analysis makes it the ideal introduction to this exciting and rapidly expanding area of research
