Be ready to interpret various graphs and selection curves.

Review the Dr. Darwin article and questions. (I cut this from the unit this semester, disregard!)

1. Explain speciation. **The evolutionary process of the creation of new species is known as SPECIATION**
2. What are homologous structures? **These are body tissues that are formed from similar tissues but have been modified for different functions. (Human Leg vs. Horse Leg)**
3. What are analogous structures? **These structures are similar in appearance and function, but have different origins. (Bird/Bat/Insect Wings)**
4. What are vestigial organs? **These are parts of an organism that have little or no apparent purpose**
5. What is artificial selection? **This is when man selects which organisms to breed, so they are selecting for traits, rather than nature.**
6. What is the difference between stabilizing, directional, and disruptive selection?

Directional Selection:
here the mean value for a trait shifts in a particular direction.

Stabilizing Selection:
Normally occurs in an unchanging environment.

Disruptive Selection: works against individuals in the middle of the spectrum and for those at the ends.

7. What are some examples of artificial selection? **Cows that give more milk, species of dogs, gigantic crops, etc**
8. What ship did Darwin sail on? **HMS Beagle**
9. Based on the article we read, why don't scientists believe that dinosaurs fied? (another disregard!)
10. Explain fitness. **This is the ability to pass your genes on to the next generation.**
