MICHAEL E. JR. HANYAK, 2021 Progress in Ecological Stoichiometry Dedmer B. Van de Waal, James J. Elser, Adam C. Martiny, Robert W. Sterner, James B. Cotner, 2018 Ecological stoichiometry concerns the way that the elemental composition of organisms shapes their ecology It deals with the balance or imbalance of elemental ratios and how that affects organism growth nutrient cycling and the interactions with the biotic and abiotic worlds The elemental composition of organisms is a set of constraints through which all the Earth's biogeochemical cycles must pass All organisms consume nutrients and acquire compounds from the environment proportional to their needs Organismal elemental needs are determined in turn by the energy required to live and grow the physical and chemical constraints of their environment and their requirements for relatively large polymeric biomolecules such as RNA DNA lipids and proteins as well as for structural needs including stems bones shells etc These materials together constitute most of the biomass of living organisms Although there may be little variability in elemental ratios of many of these biomolecules changing the proportions of different biomolecules can have important effects on organismal elemental composition Consequently the variation in elemental composition both within and across organisms can be tremendous which has important implications for Earth's biogeochemical cycles It has been over a decade since the publication of Sterner and Elser's book Ecological Stoichiometry 2002 In the intervening years hundreds of papers on stoichiometric topics ranging from evolution and regulation of nutrient content in organisms to the role of stoichiometry in populations communities ecosystems and global biogeochemical dynamics have been published Here we present a collection of contributions from the broad scientific community to highlight recent insights in the field of Ecological Stoichiometry

**ACI Structural Journal**, 2008 **Companion in Chemical Engineering** Michael E Hanyak Jr, 2019-11-12 A Companion in Chemical Engineering CinChE is designed to aid students in the development of their critical thinking skills as an engineering problem solver The creative problem solving methodology emphasized in CinChE provides a general framework in which to solve any type of well defined engineering problem involving material balances phase equilibria and energy balances It is a systems strategy that heavily uses the mental processes of decomposition chunking and pattern matching and it is specifically designed to enhance students higher order thinking skills of analysis synthesis and evaluation

The CinChE methodology is more systematic than the problem solving strategies found in most textbooks for the introductory course on chemical engineering. Many of the example problems presented in the CinChE manual are similar to ones found in the Elementary Principles of Chemical Processes textbook Felder Rousseau and Bullard 2016 but their solutions are based on the problem solving methodology emphasized in the CinChE manual. Because the CinChE manuscript was compiled using Adobe Acrobat R it contains many popup notes and web links. Using a supplied web address and Acrobat Reader R students can electronically view the popup notes and access the web links that appear in many of the graphic organizers and example problems of the paper copy. The popup notes provide valuable information to help clarify the content within a graphic organizer or an example problem. The web links access text files, Excel R files, Aspen HYSYS R files and pdf files. Students can download and view the electronic version of the CinChE manual but cannot copy or print its contents. An Excel Add In called EZ Setup that works on Windows based and Apple based computers is provided with the second edition. This VBA Add In macro is used extensively throughout the second edition to solve many exercises and problems. The purpose of the EZ Setup utility is to transform a textual description of a set of algebraic equations into an Excel Data Solver formulation allowing the user to execute the Data Solver command to find possibly a numerical solution to the algebraic equations by minimizing the sum of squares. A textual description is a mathematical model or a mathematical algorithm that represents the solution for an exercise or a problem.
