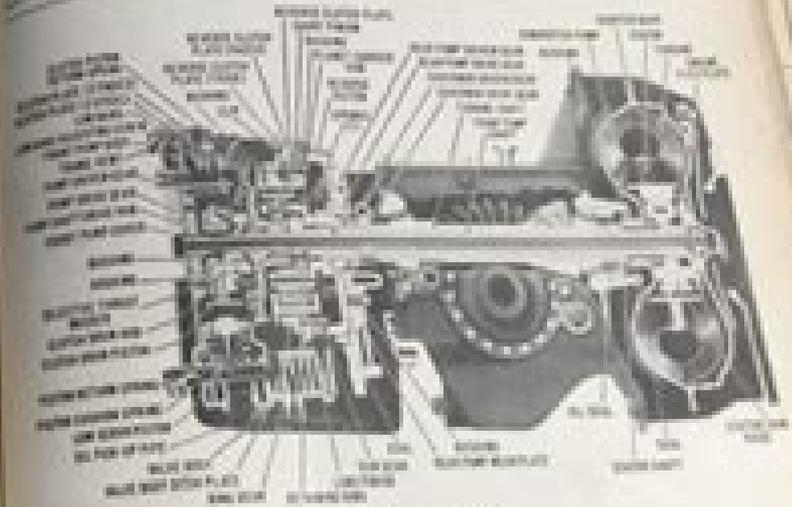

Fig. 1. Powerglide

### DESCRIPTION

The Corvair Powerglide transmission is a four-speed manual transmission. It is designed to provide smooth shifting and efficient power transfer from the engine to the rear axle. The transmission consists of a housing, input shaft, output shaft, and four gears. The input shaft is connected to the engine, and the output shaft is connected to the rear axle. The four gears are arranged in a row, and the driver selects the desired gear by moving the shift lever.

### MAINTENANCE

Adding Oil  
The Corvair Powerglide transmission requires regular oil changes to ensure proper lubrication and smooth operation. The oil level should be checked regularly, and the oil should be changed at the intervals specified in the maintenance schedule. The oil should be drained from the transmission, and the filter should be replaced. The oil should then be refilled with the recommended grade of oil.
