Lee, 2010-08-09 The field of regenerative medicine is in its infancy state Enthusiasm for the potential of organ regeneration lies with the potential pluripotency of stem cells to differentiate into various tissue types This volume of Methods in Molecular Biology will focus on the use of stem cells for myocardial repair and regeneration The emphasis of this issue will be to provide basic scientists translational

investigators and cardiologists a means to evaluate the efficacy and safety of stem cells in a standardized fashion for myocardial regeneration. Many different cell types have been considered for myocardial repair. Adult cardiac myocytes are unable to survive even when transplanted into normal myocardium. The use of fetal or neonatal cardiomyocytes is not a feasible source of cells due to ethical concerns and donor availability. Therefore, the use of pluripotent stem cells has become the focus of a cell source for myocardial repair and regeneration. A variety of stem cell types have been suggested to participate in myocardial repair. This has led the investigators to search for the optimal cell type for myocardial repair. Reliable isolation of the cell source with the ability to expand the cell population is a prerequisite. In the first section of this book, methods for isolation of commonly used stem cells being investigated for myocardial regeneration are presented. Once a stem cell source has been selected, the stem cell needs to be tested in an appropriate animal model before being translated into clinical practice.

Stem Cells and Myocardial Regeneration Marc S. Penn, 2007-11-06. Over the past 5 years, there has been great excitement and controversy in the scientific, financial, and lay literature for the potential of stem cell-based strategies for the prevention and treatment of chronic heart failure (CHF). Not that long ago, we believed we were born with a set number of cardiac myocytes and that once damaged, there was no hope to replace them. The interest in the field stems from the magnitude of cardiovascular disease in the world. Our ability to treat and help patients survive acute

myocardial infarction MI has resulted in a near epidemic of CHF There are more than 5 million Americans who currently carry the diagnosis of CHF With more than 1 million MIs a year in the United States there are approx 500 000 new cases of CHF diagnosed each year The goal of Stem Cells and Myocardial Regeneration is to present in a coherent manner the current state of knowledge of stem cell based therapies for cardiac dysfunction including current findings in both the laboratory and the clinic trials The first section of this Stem Cells and Myocardial Regeneration focuses on the magnitude of the problem and the successes and failures of what we consider optimal medical therapy It is on this background that stem cell based therapy needs to build
