

172 ChemActivity 12: Chirality

17. Determine the absolute configuration of each chiral center in the following molecules.

18. Sometimes a molecule with one or more chiral centers is drawn without giving enough information to determine if the chiral center(s) are R or S. Mark each chiral center below with an *.

By convention, if enough information is not given to assign R or S, we are to assume that the structure represents an even mixture of all stereochemical possibilities. For each structure above, draw all configurational stereoisomers implied by the drawing.

19. Label every chiral center on the following molecules with an R or S and state whether the molecule as a whole is chiral.

Penicillin G

Aleve (Naproxen)

20. How many different configurational stereoisomers of each molecule in the previous question are there (including the one shown)?
21. Read the assigned sections in your text, and do the assigned problems.
