Chemical Equilibrium occurs in a reversible reaction when the rate of the forward reaction equals the rate of the reverse reaction. Equilibrium constants are represented by the symbol K_c .

What is Equilibrium?
 A reversible reaction is one that can proceed in either direction. At equilibrium, the rate of the forward reaction is equal to the rate of the reverse reaction. The concentrations of the reactants and products remain constant over time.

Equilibrium Constant K_c
 The equilibrium constant K_c is a ratio of the concentrations of the products to the concentrations of the reactants, each raised to the power of their stoichiometric coefficients. For a general reaction:
