Computer Explorations in Signals and Systems Using MATLAB John R. Buck, Michael M. Daniel, Andrew Singer, 1997 Designed to develop greater understanding of the principles of signals and systems these

computer exercises make direct connections between theory and application Using MATLAB the exercises actively challenge the reader to apply mathematical concepts to real world problems Exercises wherever possible have been divided into Basic Intermediate and Advanced Problems allowing the reader to progress from fundamental theory to real applications

Digital Audio Restoration Simon J. Godsill, Peter J.W. Rayner, 2013-12-21 The application of digital signal processing DSP to problems in audio has been an area of growing importance since the pioneering DSP work of the 1960s and 70s In the 1980s DSP micro chips became sufficiently powerful to handle the complex processing operations required for sound restoration in real time or close to real time This led to the first commercially available restoration systems with companies such as CEDAR Audio Ltd in the UK and Sonic Solutions in the US selling dedicated systems world wide to recording studios broadcasting companies media archives and film studios Vast amounts of important audio material ranging from historic recordings of the last century to relatively recent recordings on analogue or even digital tape media were noise reduced and re released on CD for the increasingly quality conscious music enthusiast Indeed the first restorations were a revelation in that clicks crackles and hiss could for the first time be almost completely eliminated from recordings which might otherwise be unreleasable in CD format Until recently however digital audio processing has required high powered computational engines which were only available to large institutions who could afford to use the sophisticated digital remastering technology With the advent of compact disc and other digital audio formats followed by the increased accessibility of home computing digital audio processing is now available to anyone who owns a PC with sound card and will be of increasing importance in association with digital video as the multimedia revolution continues into the next millennium Digital Processing of Random Signals Boaz Porat, 1994 Advanced Signal Processing and Digital Noise Reduction Saeed V. Vaseghi, 1996-05 Bayesian Estimation and classification Hidden markov models Wiener filters Kalman and adaptive least squared error filters *Applications of Digital Image Processing*, 1994 SSP..., 2003 **Journal of the Audio Engineering Society** Audio Engineering Society, 1997 Directory of members published as pt 2 of Apr 1954 issue Detection and Estimation Theory and Its Applications Thomas A. Schonhoff, Arthur Anthony Giordano, 2006 For courses in Estimation and Detection Theory offered in departments of Electrical Engineering This is the first student friendly textbook to comprehensively address the topics of both detection and estimation with a thorough discussion of the underlying theory as well as the practical applications By addressing detection and estimation theory in the same volume the authors encourage a greater appreciation of the strong coupling and often blurring of these fields of study In order to modernize classical topics the text focuses on discrete signal processing with continuous signal presentations included to demonstrate uniformity and consistency of the results *Algorithms for Synthetic Aperture Radar Imagery*, 1999 *Algorithms for Synthetic Aperture Radar Imagery II* Dominick A.
