*Rhumb Lines and Map Wars* Mark Monmonier,2010-11-15 In *Rhumb Lines and Map Wars* Mark Monmonier offers an insightful richly illustrated account of the controversies surrounding Flemish cartographer Gerard Mercator s legacy He takes us back to 1569 when Mercator announced a clever method of portraying the earth on a flat surface creating the first projection to take into account the earth s roundness As Monmonier shows mariners benefited most from Mercator s projection which allowed for easy navigation of the high seas with rhumb lines clear cut routes with a constant compass bearing for true direction But the projection s popularity among nineteenth century sailors led to its overuse often in inappropriate non navigational ways for wall maps world atlases and geopolitical propaganda Because it distorts the proportionate size of countries the Mercator map was criticized for inflating Europe and North America in a promotion of colonialism In 1974 German historian Arno Peters proffered his own map on which countries were ostensibly drawn in true proportion to one another In the ensuing map wars of the 1970s and 1980s these dueling projections vied for public support with varying degrees of success Widely acclaimed for his accessible intelligent books on maps and mapping Monmonier here examines the uses and limitations of one of cartography s most significant innovations With informed skepticism he offers insightful interpretations of why well intentioned clerics and development advocates rallied around the Peters projection which flagrantly distorted the shape of Third World nations why journalists covering the controversy ignored alternative world maps and other key issues and how a few postmodern writers defended the Peters worldview with a self serving overstatement of the power of maps *Rhumb Lines and Map Wars* is vintage Monmonier historically rich beautifully written and fully engaged with the issues of our time

**Small-Scale Map Projection Design** Frank Canters,2002-02-21 The use of computers in cartography has made it easier for map makers to transform data from one map projection to another and experiment with alternative representations of geographical data This has created new challenges and opportunities for map projection scientists *Small Scale Map Projection Design* focuses on numerical map projection research and is written from the perspective of the map projection user It demonstrates how advances in the measurement of

map projection distortion and in the development of low error map projections can help map makers decide what type of map projection is best for their purpose and shows how they can eventually design their own map projections *The Times Compact History of the World and World Atlas*, 2005 A lavish pack incorporating two of The Times finest atlases and history books This set is the ideal geography and history reference Carrying the authority of The Times and its unrivalled reputation for accurate and current information these two books are an authoritative guide to the world past and present The Times Compact History of the World is the most comprehensive small format single volume illustrated history of the world richly enhanced with striking maps and photographs and featuring an accessible text by leading academics It is fully up to date with the Indian Ocean tsunami and the overthrow of Saddam Hussein The Times World Atlas is a complete world reference atlas in a convenient and easy to use format retaining the authority style and detail of the larger Times atlases All the mapping and information in this new edition has been brought fully up to date to give an accurate picture of today's world Detailed reference maps in the distinctive and respected Times style provide balanced systematic coverage of all parts of the world All 25 000 place names on the maps are fully indexed The introductory section presents an extensive states and territories guide along with thematic maps and statistics on major world themes giving an accurate picture of today's world
