

Side intake — dry pit pumps

The following guidelines are offered for typical dry pit type pump arrangements as illustrated in Fig. 12 for a horizontal pump and Fig. 13 for a vertical centrifugal or scroll case type of pump. In these illustrations dimension "D" is the diameter, or effective diameter, of the suction intake fitting.

1. Submergence "S" should be approximately one foot for each foot per second at "D." Velocity at "D" should be less than 6 ft/sec.
2. Radius "R" should be as large as possible within structure limitations.
3. Submergence can be reduced to half the values indicated in (1) with either a roof or vertical baffle. A vertical baffle should have ample depth to be effective and centrally located. At location D alternate shapes can be used to further reduce depth; i.e. rectangular or elliptical areas. Effective "D" then becomes the average diameter of the two axes. Always check NPSHR.
