Network Science National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2006-01-15

The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military's dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science

Large Scale Structure and Dynamics of Complex Networks Guido Caldarelli, Alessandro Vespignani, 2007

This book is the culmination of three years of research

effort on a multidisciplinary project in which physicists mathematicians computer scientists and social scientists worked together to arrive at a unifying picture of complex networks The contributed chapters from a reference for the various problems in data analysis visualization and modeling of complex networks *Modularity and Dynamics on Complex Networks* Renaud Lambiotte, Michael T. Schaub, 2022-02-03 Complex networks are typically not homogeneous as they tend to display an array of structures at different scales A feature that has attracted a lot of research is their modular organisation i e networks may often be considered as being composed of certain building blocks or modules In this Element the authors discuss a number of ways in which this idea of modularity can be conceptualised focusing specifically on the interplay between modular network structure and dynamics taking place on a network They discuss in particular how modular structure and symmetries may impact on network dynamics and vice versa how observations of such dynamics may be used to infer the modular structure They also revisit several other notions of modularity that have been proposed for complex networks and show how these can be related to and interpreted from the point of view of dynamical processes on networks
