The Visual Language of Technique Luigi Cocchiarella, 2015-03-19 The book is inspired by the third seminar in a cycle connected to the celebrations of the 150th anniversary of the Politecnico di Milano

July 2013 Educating by Image Teaching Styles vs Learning Styles was the motto of this meeting The contributions coming from lectures the poster session interviews and round table aim to propose an updated look at visual education highlighting how digital tools and networks have profoundly affected the representational styles of the teachers and the cognitive styles of

the learners while at the same time reaffirming the importance of the interaction between the two groups As Herbert Alexander Simon once said Learning results only from what the student does and thinks therefore the teacher can advance learning only by influencing what the student does to learn That is no mean feat if we consider that according to Benjamin Samuel Bloom visual education not only involves the pure cognition but also the affective and the psychomotor domains not to mention the social aspects This is why alongside some theoretical and historical retrospectives the contributions recommend a continuous revision of what and how could be included in the academic curricula also in connection with secondary schools the professional world targeted Lifelong Learning Programmes for students and teachers The volume includes an interview with the science journalist and writer Piero Angela

The Modeling of Design Ideas Walter E. Rodriguez, 1991-12 This engineering graphics text features an integrated focus on engineering design visualization using both sketching and geometric modelling techniques The objective is to develop the essential design visualization abilities required to create develop and convey design ideas The presentation aims to assist readers in mastering the processes of visual thinking brainstorming sketching modelling and documenting A solutions manual is available

Engineering Education John Heywood, 2006-01-24 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years much of the published information has been restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be more effective leaders and advocates in curriculum and research development The author's first objective is to provide an illustrative review of research and development in engineering education since 1960 His second objective is with the examples given to encourage the practice of classroom assessment and research and his third objective is to promote the idea of curriculum leadership The publication is divided into four main parts Part I demonstrates how the underpinnings of education history philosophy psychology sociology determine the aims and objectives of the curriculum and the curriculum's internal structure which integrates assessment content teaching and learning Part II focuses on the curriculum itself considering such key issues as content organization trends and change A chapter on interdisciplinary and integrated study and a chapter on project and problem based models of curriculum are included Part III examines problem solving creativity and design Part IV delves into teaching assessment and evaluation beginning with a chapter on the lecture cooperative learning and teamwork The book ends with a brief insightful forecast of the future of engineering education Because this is a practical tool and reference for engineers each chapter is self contained and may be read independently of the others Unlike other works in engineering education which are generally intended for educational researchers this publication is written not only for researchers in the field of engineering education but also for all engineers who teach All readers acquire a host of practical skills and knowledge in the fields of learning philosophy sociology and history as they

specifically apply to the process of engineering curriculum improvement and evaluation

Interactive Sketch-based Interfaces and Modelling for Design Alexandra Bonnici, Kenneth P. Camilleri, 2023-05-31 Sketching is a natural and intuitive communication tool used for expressing concepts and ideas that are difficult to communicate through text or speech alone In design applications drawings are used at various stages of the design process from the early concept drawings scribbled on a piece of paper to immersive interactions in which users manipulate and adjust the 3D form of an object in virtual or augmented reality environments This variety in drawing activities brings about the need for different interpretation strategies that support not only the sketching activity itself but also allow sketch based interactions such as sketch based queries to take place In this book we explore the different drawing approaches used in design and the algorithms required for processing and interpreting the different sketches and drawings in design The book is divided into two parts The first part focuses on sketching in the 2D domain This includes the digitization of offline and paperbased sketches techniques for online sketch recognition observations of user drawing habits algorithms for inferring depth from 2D drawings as well as non photorealistic rendering techniques that are then applied to sketch based queries The second part of the book focuses on 3D sketching in virtual or augmented reality spaces Here we present the processing and rendering of the 3D strokes the different interaction devices available for 3D sketching and look at different applications where immersive 3D sketching has been applied with success
