**The Routledge Companion to Automobile Heritage, Culture, and Preservation** Barry L. Stiefel, Jennifer Clark, 2019-12-06 The Routledge Companion to Automobile Heritage Culture and Preservation explores automotive heritage its place in society and the ways we might preserve and conserve it Drawing on contributions from academics and practitioners around the world and comprising six sections this volume carries the heritage discourse forward by exploring the complex and sometimes intricate place of automobiles within society Taken as a whole this book helps to shape how we think about automobile heritage and considers how that heritage explores a range of cultural intellectual emotional and material elements well outside of the automobile body itself Most importantly perhaps it questions how we might better acknowledge the importance of automotive heritage now and in the future The Routledge Companion to Automobile Heritage Culture and Preservation is unique in that it juxtaposes theory with practice academic approaches with practical experience and recognizes that issues of preservation and conservation belong in a broad context As such this volume should be essential reading for both academics and practitioners with an interest in automobiles cultural

heritage and preservation      **Air Force Magazine** ,2012-07      **Vehicle Feedback and Driver Situation Awareness** Guy H. Walker, Neville A. Stanton, Paul M. Salmon, 2018-04-17 A potentially troubling aspect of modern vehicle design some would argue is a trend for isolating the driver and reducing vehicle feedback usually in the name of comfort and refinement but increasingly because of automation There is little doubt cars have become more civilised over the years yet despite this the consequences of driver behaviour remain to a large extent anecdotal Readers will have heard such anecdotes for themselves They usually take the form of drivers of a certain age recalling their first cars from the 1970s or 80s in which doing 70 mph really felt like it The question is whether such anecdotes actually reflect a bigger more significant issue that could be better understood Related questions have been explored in other domains such as aviation where the change to fly by wire did indeed bring about some occasionally serious performance issues that were not anticipated Despite some clear parallels automotive systems have been left relatively unstudied The research described in this book aims to explore precisely these issues from a Human Factors perspective This means connecting the topics of vehicle feel vehicle dynamics and automotive engineering with the latest research on driver situation awareness The problem is explored experimentally from a variety of theoretical viewpoints but the outcomes are consistently practical Here we have a promising new avenue along which the driver experience can be enhanced in novel and insightful ways Tools and templates are provided so that engineers and designers can try different ways to boost vehicle safety efficiency and enjoyment from a human centered perspective Association of American Publishers AAP Finalist for the 2019 PROSE Award Features Diagnosis of how vehicle feel impacts driver situation awareness and how this could aid future vehicle designs Multi theory approach to driver situation awareness and how different views of this important concept give rise to different insights Comprehensive analysis of situation awareness in driving the information requirements of drivers and how these needs can be supported Practical descriptions of how state of science Human Factors methods have been applied in practice      **The Green Transition in Motorsport** Hans Erik Næss, Samuel Tickell, 2024-10-28 This book is a critical exploration of motorsport s contribution to the green transition understood as a societal shift towards a fossil free future a circular economy and greater social inclusiveness The book takes a critical look at the historical impact of motorsport and the current business and sporting models that determine its sustainability as well as the innovation that might contribute solutions to wider social and environmental problems Drawing on perspectives from sociology media and sport business the book unpacks the complexity of stakeholder interests in motorsport that might constrain positive change Presenting cases and data from Formula One Formula E Extreme E the World Rally Championship NASCAR and the World Endurance Championship the book considers the technological and organizational change required to address the triple bottom line of financial environmental and social sustainability and looks at how audiences markets teams governing bodies corporations and state actors combine to shape the social and economic environments within which motorsport takes place Representing a unique case study of the impact of elite sport on wider

society this book is fascinating reading for anybody with an interest in motorsport sport business sustainable business or environment society and culture
